jan 21 2020 calculus is a branch of mathematics that involves the study of rates of change before calculus was invented all math was static it could only help calculate objects that were perfectly still but the universe is constantly moving and changing no objects from the stars in space to subatomic particles or cells in the body are always at rest in calculus the quotient rule is a method of finding the derivative of a function that is the ratio of two differentiable functions let  $h(x) = \frac{f(x)}{g(x)}$  where both  $f$  and  $g$  are differentiable and  $g(x) \neq 0$  the quotient rule states that the derivative of  $h(x)$  is  $h'(x) = \frac{f'(x)g(x) - f(x)g'(x)}{g(x)^2}$  calculus is now the basic entry point for anyone wishing to study physics chemistry biology economics finance or actuarial science calculus makes it possible to solve problems as diverse as tracking the position of a space shuttle or predicting the pressure building up behind a dam as the water rises computers have become a valuable tool for solving calculus problems that fundamental theorem of calculus and definite
