Table of Contents Introduction to Shell Scripting Patterns and Regular Expressions Basic Shell Scripting Core Shell Features Explained Shells Within Shells Invocation and Execution Shell Language Portability Utility Portability Bringing It All Together Shell Script Design Mixing and Matching The deciphering of the Indus script has met with suspicion and is exposed to ridicule even. Many people are nowadays of the opinion that the Indus script is altogether indecipherable, if not a bilingual of considerable size turns up. The approach to a decipherment presented in this volume makes avail of a bilingual, too, but its masterkey is the discovering of the symbolic connection of the Indus signs with the metaphoric language of the Rg-Veda. Nearly 200 inscriptions, among them the longest and those with the most interesting motifs, have been decoded here by setting them syllable for syllable in relation to Rg-Vedic verses. The results that were gained by this method for the pictographic values of the Indus signs are surprising and far beyond the possibilities of the most daring phantasy. At the same time many problems of the Rg-Veda could be solved or new insights be won. Original. THE BESTSELLING AUTHOR OF PITCH ANYTHING IS BACK TO FLIP YOUR ENTIRE APPROACH TO PERSUASION. Is there anything worse than a high-pressure salesperson pushing you to say "yes" (then sign on the dotted line) before you're ready? If there's one lesson Oren Klaff has learned over decades of pitching, presenting, and closing long-shot, high-stakes deals, it's that people are sick of being marketed and sold to. Most of all, they hate being told what to think. The more you push them, the more they resist. What people love, however, is coming up with a great idea on their own, even if it's the idea you were guiding them to have all along. Often, the only way to get someone to sign is to make them feel like they're smarter than you. That's why Oren is throwing out the old playbook on persuasion. Instead, he'll show you a new approach that works on this simple insight: Everyone trusts their own ideas. If, rather than pushing your idea on your buyer, you can guide them to discover it on their own, they'll believe it, trust it, and get excited about it. Then they'll buy in and feel good about the chance to work with you. That might sound easier said than done, but Oren has taught thousands of people how to do it with a series of simple steps that anyone can follow in any situation. And as you'll see in this book, Oren has been in a lot of different situations. He'll show you how he got a billionaire to take him seriously, how he got a venture capital firm to cough up capital, and how he made a skeptical Swiss banker see him as an expert in banking. He'll even show you how to become so compelling that buyers are even more attracted to you than to your product. These days, it's not enough to make a great pitch. To get attention, create trust, and close the deal, you need to flip the script. An introduction to the history and techniques of writing that offers a thorough and accessible historical overview of techniques and processes, illustrated with examples, diagrams, and photographs of crafts people at work. A history of calligraphy and lettering offers examples of typefaces found on formal announcements, invitations, advertising, and other "commercial handwriting" from the United States, England, Germany, France, and Italy. "Provides theater students and emerging theater artists with the tools, skills and a shared language to analyze play scripts, communicate about them and collaborate with others on stage productions ... Born a generation apart and with very different ideas about love and family, Mariam and Laila are two women brought jarringly together by war, by loss, and by fate. As they endure the ever-escalating dangers around them--in their home, as well as in the streets of Kabul--they come to form a bond that makes them both sisters and mother-daughter to each other, and that will ultimately alter the course not just of their own lives but of the next generation. With heart-wrenching power and suspense, playwright Ursula Rani Sarma reimagines Hosseini's novel to show how a woman's love for her family can move her to shocking and heroic acts of self-sacrifice, and that in the end it is love, or even the memory of love, that is often the key to survival. A stunning accomplishment, this reimagination of *A Thousand Splendid Suns* is a haunting, heartbreaking, compelling production about unlikely friendship and indestructible love. This adaptation was first performed by the American Conservatory Theater in San Francisco in February 2017. On a typical suburban street in a typical suburban town, there is an ordinary family living the American dream. But look closer. Lester Burnham's wife, Carolyn, regards him with contempt, his daughter, Jane, thinks he's a loser, and his boss is positioning him for the ax. Captivated by Jane's sultry high school friend Angela,

Lester decides to make a few changes in his mere existence—changes that are less mid-life crisis than a life reclaimed. The freer he gets, the happier he gets, which is even more maddening to his wife and daughter. Complicating matters, Lester finds an unexpected ally in Ricky, the teenage son of the new next-door neighbors, who sees life through a camera lens that has lately focused on Jane Burnham. In pursuit of his new vision of the American dream, Lester is about to learn that the ultimate freedom comes at the ultimate price.

Of course, to embrace all existing aspects of power system modelling would lead to an encyclopedia and would be likely an impossible task. Thus, the book focuses on a subset of power system models based on the following assumptions: (i) devices are modelled as a set of nonlinear differential algebraic equations, (ii) all alternate-current devices are operating in three-phase balanced fundamental frequency, and (iii) the time frame of the dynamics of interest ranges from tenths to tens of seconds. These assumptions basically restrict the analysis to transient stability phenomena and generator controls. The modelling step is not self-sufficient. Mathematical models have to be translated into computer programming code in order to be analyzed, understood and "experienced". It is an object of the book to provide a general framework for a power system analysis software tool and hints for filling up this framework with versatile programming code. This book is for all students and researchers that are looking for a quick reference on power system models or need some guidelines for starting the challenging adventure of writing their own code.
