jan 27 2023 starting with the emergence of quantum mechanics the world of physics has been divided between classical and quantum physics classical physics deals with the motions of objects we typically in physics we want to explain why objects move around the way they do however it would be hard to explain motion if we didn't know how to describe motion so first in the topics one dimensional motion and two dimensional motion we'll learn how to precisely describe the motion of objects and predict their motion for some special cases jan 11 2023 physics science that deals with the structure of matter and the interactions between the fundamental constituents of the observable universe in the broadest sense physics from the greek *physikos* is concerned with all aspects of nature on both the macroscopic and submicroscopic levels its scope of study encompasses not only the behaviour of objects under in the field of physics which you could view maybe right after mathematics as the purest of the sciences so you have math which is very pure and then on that foundation of math you have physics and physics really does try to use that mathematics along with some core ideas to explain the phenomena all the phenomena of the universe all of the ideas and concepts of ap physics 1 are a prerequisite for ap physics 2 you don't need to know every math idea in algebra and trigonometry and you can learn a lot of it along the way but the more math that's foreign to you the likelier it is that physics might look like mathematical witchcraft physics ?fiz icks 1 a science that deals with matter and energy and their actions upon each other in the fields of mechanics heat light electricity sound and the atomic nucleus 2 physical physics spotlighting exceptional research viewpoint probing majorana neutrinos january 30 2023 detecting neutrinoless double beta decay would confirm that the neutrino is its own antiparticle data from the kamland zen experiment contain no strong evidence of such events constraining neutrino properties read more news feature physics is the natural science that studies matter its fundamental constituents its motion and behavior through space and time and the related entities of energy and force physics is one of the most fundamental scientific disciplines with its main goal being to understand how the universe behaves jan 27 2023 physics 50 years ago physicists found the speed of light in the 1970s scientists set a new maximum speed limit for light fifty years later they continue putting light through its paces by welcome to the physics library physics is the
