Communicating Process Architectures 2005 Jun 02 2020 The awareness of the ideas characterized by Communicating Processes Architecture and their adoption by industry beyond their traditional base in safety-critical systems and security is growing. The complexity of modern computing systems has become so great that no one person – maybe not even a small team – can understand all aspects and all interactions. The only hope of making such systems work is to ensure that all components are correct by design and that the components can be combined to achieve scalability. A crucial property is that the cost of making a change to a system depends linearly on the size of that change – not on the size of the system being changed. Of course, this must be true whether that change is a matter of maintenance (e.g. to take advantage of upcoming multiprocessor hardware) or the addition of new functionality. One key is that system composition (and disassembly) introduces no surprises. A component must behave consistently, no matter the context in which it is used – which means that component interfaces must be explicit, published and free from hidden side-effect. This publication offers strongly refereed high-quality papers covering many differing aspects: system design and implementation (for both hardware and software), tools (concurrent programming languages, libraries and run-time kernels), formal methods and applications.

The Key Code and Advanced Handbook for the Governance and Supervision of Banks in Australia Aug 05 2020 This Key Code and Handbook examines the corporate governance and accountability of Major Banks, their directors and executives which were the central focus of bank, Supervisor, Regulator and governmental activity and public scrutiny in 2018 and 2019. This book explores this responsibility focus by providing evidence from the Global Financial Crisis and beyond with both APRA and ASIC investigating illegal conduct, misconduct and conduct which was below the level of community expectations. This book discusses how the Royal Commission into misconduct in the banking and financial services industry has already given rise to a detailed Final Report whose recommendations are still being put into effect.

Further, this book uses evidence provided by the large number of Prudential Standards issued by APRA and investigations into the conduct of Major Banks by Regulators. This book explores governance variables – over 1,700 in number and grouped into 159 ‘ key groupings ’ or separate categories – which are all indexed to 28 governmental, regulatory and supervisory reports and documents to create a governance code and commentary specifically tailored to Australian banks. Each governance variable is modelled on the Stage 1 Relational Approach contained in Enhancing Firm Sustainability Through Governance. Given the huge interest in the governance of banks, Parts 1 and 2 – explaining the Relational Approach - of Stage 1 were recently published in November 2018 and June 2019 in the Australian Journal of Corporate Law. This book is the largest reference book and handbook in publication worldwide containing the structures, mechanisms, processes and protocols – the checks and balances we call ‘ governance variables ’ – that deeply addresses and explains banking accountability and regulation in Australia.
