It deals with the function and main use of the different AO implants, the use of the different AO instruments, and with the essentials of the operative technique and of postoperative care. It also discusses the handling of the most important postoperative complications. The second part deals at length with the AO recommendations for the operative treatment of the most common closed fractures in the adult. This has been organized in anatomical sequence. The discussion of the closed fractures is followed by a discussion of open fractures in the adult, then by fractures in children and finally by pathological fractures. The third part presents, in a condensed fashion, the application of stable internal fixation to reconstructive bone surgery.

### 1 GENERAL CONSIDERATIONS

#### 1 Aims and Fundamental Principles of the AO Method

The Chief Aim of Fracture Treatment is the Full Recovery of the Injured Limb In every fracture there is a combination of damage to both the soft tissues and to bone. Immediately after the fracture and during the phase of repair, we see certain local circulatory disturbances, certain manifestations of local inflammation, as well as pain and reflex splinting. These three factors, that is, circulatory disturbances, inflammation and pain, when combined with the defuncting of bone, joints and muscle, result in the so-called 'fracture disease'. This is the essential up to date review of the difficult topics in surgery for knee injuries and sports injuries to the knee. The book draws international authors to include detailed reviews of treatment options and outcomes and will update surgeons and allied clinicians as to current thinking to provide a guide to treatment of the more difficult knee problems. In the last two decades, spine instrumentation and surgery have undergone many improvements. The second edition benefits from contributions by renowned orthopaedic surgeons and neurosurgeons who helped create and refine the systems described in the book, and devoted their careers to educating next generations of spine surgeons. Advancements in instrumentation - plates, cages, rods, screws, disc replacements, spacers, and fusion devices - have led to improved outcomes for patients. The spinal device field has grown exponentially, and surgeons are faced with an increasingly diverse choice of instrumentation options. While the first edition categorized available systems, the new edition is focused on helping clinicians avoid complications and quickly recognize and manage complications when they do occur.

#### Key Features

A concise yet comprehensive reference that educates clinicians on the causes, recognition, and avoidance of instrumentation complications Organized by anatomical region and condition, the visualization of relevant anatomical landmarks is discussed in context with safe use of spinal instrumentation Now four-color, with more than 230 new and original illustrations Easy-to-digest text helps translate classroom knowledge into clinical application This up-to-date book will help orthopaedic surgeons and neurosurgeons learn how to utilize spinal devices more efficaciously and safely. The text is also an excellent reference for radiologists, spine fellows and residents, and physician extenders who are interested in attaining knowledge and experience in spinal instrumentation.

Cervical Spine Research Society European Branch "The Cervical Spine Research Society is an organization of individuals interested in clinical and research problems of the cervical spine. Its purpose is for the exchange and development of ideas and philosophy regarding the diagnosis and treatment of cervical spine injury and disease. The composition of the membership should reflect the varying specialties and disciplines dealing with the cervical spine; biochemical, engineering, neurology, neurosurgery, radiology, orthopedic surgery and others", wrote J. William Fielding, New York City, one of the Society's founding members. In 1984 the membership list contained 118 names. The overwhelming majority of members came from the United States, four from Canada and 9 Europeans, amongst them Mario Boni. He was the organizer, in conjunction with the members of the Cervical Spine Research Society, of a splendid "International Meeting for the updating on pathology and surgery Preface VI of the cervical spine" held in Pavia (Italy) in May 1982. It was from this meeting that the idea of a European branch of the Society first originated, with the purpose of establishing multi-disciplinary meetings in Europe. The first meeting of the European branch was organized by A. Weidner in September 1984 in Osnabrück (Federal Republic of Germany). Mario Boni was elected president. He was not only the initiator but also the driving force who tirelessly promoted the development of the European branch. Mario Boni's death in 1986 at the age of 64 was a great loss to us. Abandoned in the past, due to inadequate instrumentation and lack of evidence, rib fixation has recently re-emerged as a treatment option for trauma patients. There have been a number of advances over the last 25 years that now allow surgeons to internally fix rib fractures that otherwise may have not had other options. However, as a result there has been a rapid increase in literature and many institutions interested in initiating rib fixation programs. Due to a variety of practitioners involved namely, trauma surgeons, orthopedic surgeons, and thoracic surgeons there has been no comprehensive guide to patient selection, technique, and post-operative care. The purpose of this text is to fill the educational gap for those trauma, orthopedic, and thoracic surgeons interested in learning the cutting edge evidence-based approaches to treatment of rib fractures. This topic has caught the interest of many and has been a recurrent theme at surgical meetings over the last two years. Although there has been ever increasing levels of interest and experience nationally there are many questions which remain. This text will provide not only the theoretical background for improving outcomes in those with rib fractures but also serve as a practical guide to those interested in starting new programs. The text will include tips and tricks that can be used in the OR or at the bedside to improve patient care. Therefore, the focus will be on a comprehensive review but also including tips and tricks from the most experienced surgeons around the country who are performing internal fixation for rib fractures.
