The 1995 National Household Education Survey (NHES:95) was a random digit dial telephone survey of households developed by the National Center for Education Statistics. The NHES:95 included two topical survey components: the Adult Education component, which collected information about adults' participation in adult education, and the Early Childhood Program Participation (ECPP) component, which collected information about children's participation in nonparental child care and early childhood programs. This manual provides documentation and guidance for users of the public release data file for the ECPP component. Information about the purpose of the study, the data collection instruments, the sample design, and data collection and data processing procedures is provided. Some information about factors that should be kept in mind when using ECPP data is also provided. For the ECPP component, interviews were conducted with parents of 14,064 children, a figure that included 101 home schooled children. Four appendixes present screening and study questionnaires, information about the file layout, the Statistical Analysis System code for derived variables, and the ECPP codebook. (Contains 8 tables, 2 figures, and 23 references.) (SLD) Excerpt from File Transfer Over the Nbsnet: User's Manual Transmits full 8-bit binary or ascii. This guide provides users of the National Household Education Survey (NHES) data with suggested techniques for working with the data files. Special attention is paid to topics that will help users avoid the most commonly made mistakes in working with NHES data. The guide is meant to be an introduction and an overview, and not a substitute for the separate user's manuals and other reports. The NHES is a data collection system of the National Center for Education Statistics that provides descriptive data on the educational activities of the U.S. population and offers policymakers, researchers, and educators a variety of statistics on the condition of education in the United States. The primary purpose of the NHES is to collect repeated measurements of the same phenomena at different points in time, but one-time surveys of topics of interest may be fielded. The NHES is a telephone survey of the noninstitutionalized civilian population of the United States, and households are selected using random digit dialing methods. The NHES has been conducted in 1991, 1993, 1995, and 1996. This guide contains the following sections: (1) introduction and overview; (2) brief descriptions of the separate NHES data files; (3) comparisons with other data sets; (4) familiarization with the data and descriptions of data collection and processing; (5) selecting variables for working data sets; (6) NHES design; (7) working with missing data; and (8) weights and estimation procedures. Appendixes contain commonly asked questions and answers, examples that illustrate

points in the text, and a summary of weighting and sample variance estimation variables. (Contains 10 references.) (SLD)
