web [linear equations 1 google classroom about transcript to solve linear equations find the value of the variable that makes the equation true use the inverse of the number that multiplies the variable and multiply or divide both sides by it simplify the result to get the variable value check your answer by plugging it back into the equation](#) web in simple words [equations mean equality i e the equal sign that s what](#)

equations are all about equating one quantity with another algebraic equations equations are like a balance scale if you've seen a balance scale you would know that an equal amount of weight has to be placed on either side for the scale to be considered balanced

web skill summary algebraic equations basics one step equations intuition quiz 1 5 questions practice what you've learned and level up on the above skills one step addition subtraction equations one step multiplication and division equations quiz 2 5 questions practice what you've learned and level up on the above skills

web in its simplest form in algebra the definition of an equation is a mathematical statement that shows that two mathematical expressions are equal for instance $3x + 5 = 14$ is an equation in which $3x + 5$ and 14 are two expressions separated by an equal sign the most basic and simple algebraic equations consist of one or more variables in math web next we can set two expressions equal to each other by creating an equation this will allow us to solve or isolate a variable examples could be $2x + 5 = 3x + 9$ or $y = 3x + 2$ with two variables an equation can be a function if each input x in the equation above has at most one output value y in the equation above

web dec 20 2021 an equation is a mathematical sentence that has two equal sides separated by an equal sign $4 + 6 = 10$ is an example of an equation we can see on the left side of the equal sign $4 + 6$ and on the right side 10 web an equation is a statement that two expressions are equal for example the expression $5 + 3 + 5 + 3$ is equal to the expression $6 + 2 + 6 + 2$ because they both equal $8 + 8$ so we can write the following equation $5 + 3 + 6 + 2 = 5 + 3 + 6 + 2$ all equations have an equal sign

web an equation is a mathematical statement with an equal to symbol between

two expressions that have equal values for example $3x + 5 = 15$ there are different types of equations like linear quadratic cubic etc let us learn more about equations in math in this article what are equations well some equations are true for all allowed values and are then called identities example $\sin \theta = \sin(\pi - \theta)$ is one of the trigonometric identities let's try $\sin 30^\circ = \sin(180^\circ - 30^\circ)$ and $\sin 30^\circ = \sin 150^\circ$ so it is true for 30° let's try $\sin 90^\circ = \sin(180^\circ - 90^\circ)$ and $\sin 90^\circ = \sin 90^\circ$ so it is also true for 90° is it true for all values of θ well how to solve your equation to solve your equation using the equation solver type in your equation like $x^2 + 4 = 5$ the solver will then show you the steps to help you learn how to solve it on your own well in mathematics an equation is a formula that expresses the equality of two expressions by connecting them with the equals sign the word equation and its cognates in other languages may have subtly different meanings for example in french an *équation* is defined as containing one or more variables while in english any well formed formula well this pre algebra video tutorial explains how to solve basic equations by using addition subtraction multiplication and division some examples can be found at <https://www.youtube.com/watch?v=0999999999> this simple equation which states that the quantity 0.999 followed by an infinite string of nines is equivalent to one is the favorite of mathematician steven strogatz of [web in algebra 1](https://www.youtube.com/watch?v=1099999999) students solves linear and quadratic equations and learned how the two processes are based on the same logical principles in this unit we extend these processes to solve a greater variety of equations like rational and radical equations we learn that we may sometimes get extraneous solutions well algebra how to solve equations quickly youtube this pre algebra video

tutorial explains the process of solving two step equations with fractions and variables on both sides it also web this method involves completing the square of the quadratic expression to the form $x^2 + dx + e$ where d and e are constants what is the golden rule for solving equations the golden rule for solving equations is to keep both sides of the equation balanced so that they are always equal how do you simplify equations web by an equation we mean a mathematical sentence that states that two algebraic expressions are equal for example $a + b = c$, $ab = ac$, $ab = ba$ and $x^2 + 1 = x + 1$ are all equations that we have been using we recall that we defined a variable as a letter that may be replaced by numbers out of a given set during a given discussion web this video shows students how to solve simple 1 step algebra equations involving only addition or subtraction part of the algebra basics series y web equation calculator will automatically solve equations and show all of the required work tutoring looking for someone to help you with algebra at wyzant connect with algebra tutors and math tutors nearby prefer to meet online find online algebra tutors or online math tutors in a couple of clicks web equations and formulas what is an equation an equation says that two things are equal it will have an equals sign like this that equations says what is on the left $x + 2$ is equal to what is on the right 6 so an equation is like a statement this equals that note this equation has the solution $x = 4$ read how to solve equations
