This publication is a must-have for all medical undergraduates and postgraduates. The author is a distinguished clinician and educator. He is the recipient of the Order of Australia (AM) 2009 for 'service to medicine and to medical education through the development of undergraduate and professional development programs'. Written by one of the foremost historians of Chinese institutions, this book focuses on China's civil service examination system in its final and most elaborate phase during the Ch'ing dynasty. All aspects of this labyrinthine system are explored: the types of questions, the style and form in which they were to be answered, the problem of cheating, and the psychological and financial burdens of the candidates, the rewards of the successful and the plight of those who failed. Drawing on a wide range of sources, including Chinese novels, short stories, and plays, this thought provoking and entertaining book brings to vivid life the testing structure that supplied China's government bureaucracy for almost fourteen hundred years. "Professor Miyazaki's informative work is concerned with a system. . . that was, in effect, . . . the basic institution of Chinese political life, the real pillar which supported the imperial monarchy, the effective vehicle for the aspirations and ambitions of the ruling class. Imperial China without the examination system for the past thousand years and more would have developed in an entirely different way and might not have endured as the continuing form of government over a huge empire."--Pacific Affairs "The most comprehensive narrative treatment in any language of [this] enduring achievement of Chinese civilization."--American Historical Review The MRCP examination is constantly changing, reflecting the changing pressures on doctors in training. Whilst the MRCP PACES examination has evolved with the times, the core ethos of it, to act as a benchmark for sound clinical examination, logical diagnostic ability, common sense and most importantly, the development of compassionate and ethical physicians has remained unchanged. Whilst this exam has often struck fear into the hearts of junior doctors, we believe it is an assessment of progression during a physician's training that should be relished as an opportunity to demonstrate these ageless qualities that caring practitioners should possess. This book was born out of the philosophy that all doctors sitting their MRCP PACES already have the knowledge and skill to pass the exam, but just require guidance in the correct logical approach that the Royal College is looking for. The book has, therefore, quite unlike other MRCP PACES books, avoided any attempts at being a definitive text. Rather, it has focused on the key aspects that the authors believe are required to pass the examination, in particular focus on presentation style. Whilst medicine is indeed an ocean, the most commonly examined topics have been selected to reflect the likely scenarios a candidate will face -- as the old adage goes -- 'common things occur commonly'. In producing this book, extensive feedback was sought from candidates revising for the examination to reflect their needs. The layout therefore involves a methodical approach with a short introduction, similar to that presented in the exam, followed by clinical findings expected to be found. An example of presentation style has then been produced to allow the candidate to rehearse and practice this essential component of the exam. Doctors preparing for the exam have limited time due to busy work schedules. Therefore, summary books are key for candidates sitting the MRP PACES examination. Most PACES candidates fail the exam based on history and communication stations. Therefore, attention has been paid to: Print version of the book includes free access to the app (web, iOS, and Android), which offers interactive Q&A review plus the entire text of the print book! Please note the app is included with print purchase only. The most realistic practice for the FS exam Two 4-hour sessions, each containing 85 multiple-choice problems Step-by-step solutions help you check your solving methods Mentally prepares you for the pressure of working under timed conditions Helps you identify topics that require extra review The neurologic examination is often viewed as a daunting monstrosity, byzantine in nature, complex to teach and cumbersome to learn. However, neurologic conditions are not uncommon in GP and hospital practice, and a grounded understanding of pertinent neurologic symptoms, signs and conditions is absolutely vital. This book serves to demystify the seemingly convoluted processes behind the neurologic examination, with chapters focussing on bringing the reader back to the basics, breaking complicated techniques down into its individual steps, supplemented by clear and concise explanation of neurologic principles. The book discusses neurologic signs and symptoms commonly encountered in our daily practice, with flow-charts, pictures and tables to help the reader learn, shape and build a solid foundation in neurology. Tips from examiner and specific case examples are included to improve the reader's grasp of the topics. This easy-to-read guidebook is essential for all medical students and physicians seeking to prepare for their professional examinations, to improve on their care of our patients, or simply to understand the wonderful inner-workings of neurology a little better. Well written textbooks which focus on neurologic examination and written in a palatable manner for the non-neurologist, are rare and few. They are often admixed with other non-neurologic topics (e.g. respiratory, cardiac or abdominal examination), with superficial and cursory discussion of neurologic conditions. At the other end of the spectrum, neurology textbooks are often written in a manner better suited to neurologists than to non-neurologists, struggling to better understand the basic concepts. In my years of teaching students from all 3 local medical schools studying for their undergraduate medical degrees, and medical officers preparing for the MRCP PACES examination, a common problem they encountered was the lack of a palatable yet informative neurologic text which helps them understand the concepts without murdering their interest in the topic. I believe this book serves to fill that gap, and to hopefully better prepare our doctors in their careers, and to nurture their love and interest in this subject I so love. "The present work is the direct outcome of a series of lectures and demonstrations of neurological and mental examination methods which the author gave in a course to the interns of the Government Hospital for the Insane, first in 1910 and which has been repeated in subsequent years. It is also partly due to repeated suggestions that the scheme of examination published in the first edition of White's "Outlines of Psychiatry" (Chapter 7) be elaborated. The book is intended to place in the hands of psychiatrists, neurologists and students methods of examination which have been successfully used in psychological practice, to the end that the mental examination of patients may be conducted in a more systematic and scientific manner. An endeavor has been made to select methods which not only serve to show certain phases of mental processes, but which at the same time are easy to perform and are sufficiently accurate for certain kinds of research as well as for routine clinical purposes. All the methods which are described have been successfully used by the author from time to time, but it must not be assumed that each and every test may or must be applied to each and every patient who is to be examined. Alternative methods are often given because the author has found that one method can not be used with advantage with all kinds of patients"--Preface.
