Cites the growing prevalence of online courses, "unbundled" programs and education that is disconnected from sports and other previously valued university qualities to profile revolutionary changes occurring in higher education today. A formatted version of the Book of Mormon organized by events emphasizing narrators, speakers, locations, dates and quoted passages #1 NEW YORK TIMES BESTSELLER • NAACP IMAGE AWARD WINNER • A dramatic expansion of a groundbreaking work of journalism, The 1619 Project: A New Origin Story offers a profoundly revealing vision of the American past and present. FINALIST FOR THE KIRKUS PRIZE • ONE OF THE BEST BOOKS OF THE YEAR: The Washington Post, NPR, Esquire, Marie Claire, Electric Lit, Ms. magazine, Kirkus Reviews, Booklist In late August 1619, a ship arrived in the British colony of Virginia bearing a cargo of twenty to thirty enslaved people from Africa. Their arrival led to the barbaric and unprecedented system of American chattel slavery that would last for the next 250 years. This is sometimes referred to as the country's original sin, but it is more than that: It is the source of so much that still defines the United States. The New York Times Magazine's award-winning "1619 Project" issue reframed our understanding of American history by placing slavery and its continuing legacy at the center of our national narrative. This new book substantially expands on that work, weaving together eighteen essays that explore the legacy of slavery in present-day America with thirty-six poems and works of fiction that illuminate key moments of oppression, struggle, and resistance. The essays show how the inheritance of 1619 reaches into every part of contemporary American society, from politics, music, diet, traffic, and citizenship to capitalism, religion, and our democracy itself. This is a book that speaks directly to our current moment, contextualizing the systems of race and caste within which we operate today. It reveals long-glossed-over truths around our nation's founding and construction—and the way that the legacy of slavery did not end with emancipation, but continues to shape contemporary American life. A New Alafia, Ose Speaks, Volume V, written by Chief Iyanifa Moremi Osun Monife Balewa. This book is the fifth of a 16 Volume set of books about "how to interpret" the sacred Oduns of the Orisa religion. *A New Alafia, Ose Speaks, Volume V*, is also about how individuals will come to know that the blessings and the help of the Creator, Orisa and the Ancestors are readily available, through prayer and divination. The ability to succeed in life and have the peace of mind that comes from taking the mistakes out of life, by knowing the right choices. That is what this book, "A New Alafia" brings into your life. Chief Iyanifa Moremi Osun Monife Balewa has been interpreting the sacred Orisa Oduns for individuals for over 30 years. An excellent book which also contains spiritual remedies. Cover Art Illustration done by Don Mitchell.

The publication in 1648 of the first authentic account of the provinces of New Spain and Central America by a well-known and educated Englishman excited widespread interest, and The English American found many readers. From one of the leading policy experts of our time, an urgent rethinking of how we can better support each other to thrive Whether we realize it or not, all of us participate in the social contract every day through mutual obligations among our family, community, place of work, and fellow citizens. Caring for others, paying taxes, and benefiting from public services define the social contract that supports and binds us together as a society. Today, however, our social contract has been broken by changing gender roles, technology, new models of work, aging, and the perils of climate change. Minouche Shafik takes us through stages of life we all experience—raising children, getting educated, falling ill, working, growing old—and shows how a reordering of our societies is possible. Drawing on evidence and examples from around the world, she shows how every country can provide citizens with the basics to have a decent life and be able to contribute to society. But we owe each other more than this. A more generous and inclusive society would also share more risks collectively and ask everyone to contribute for as long as they can so that everyone can fulfill their potential. *What We Owe Each Other* identifies the key elements of a better social contract that recognizes our interdependencies, supports and invests more in each other, and expects more of individuals in return. Powerful, hopeful, and thought-provoking, *What We Owe Each Other* provides practical solutions to current challenges and demonstrates how we can build a better society—together. A Dominican-born academic tells the story of how the Great Books transformed his life—and why they have the power to speak to people of all backgrounds What is the value of a liberal education? Traditionally characterized by a rigorous engagement with the classics of Western thought and literature, this approach to education is all but extinct in American

universities, replaced by flexible distribution requirements and ever-narrower academic specialization. Many academics attack the very idea of a Western canon as chauvinistic, while the general public increasingly doubts the value of the humanities. In *Rescuing Socrates*, Dominican-born American academic Roosevelt Montás tells the story of how a liberal education transformed his life, and offers an intimate account of the relevance of the Great Books today, especially to members of historically marginalized communities. Montás emigrated from the Dominican Republic to Queens, New York, when he was twelve and encountered the Western classics as an undergraduate in Columbia University's renowned Core Curriculum, one of America's last remaining Great Books programs. The experience changed his life and determined his career—he went on to earn a PhD in English and comparative literature, serve as director of Columbia's Center for the Core Curriculum, and start a Great Books program for low-income high school students who aspire to be the first in their families to attend college. Weaving together memoir and literary reflection, *Rescuing Socrates* describes how four authors—Plato, Augustine, Freud, and Gandhi—had a profound impact on Montás's life. In doing so, the book drives home what it's like to experience a liberal education—and why it can still remake lives. Offers seasonal recipes that celebrate the ease of eating vegetables year round, including options that star corn, peppers, and okra in the summer and cabbage, potatoes, and mushrooms in the winter. The perennial favorite for parents who want to get their kids to sleep with ease—now in its fifth edition, fully revised and updated, with a new step-by-step guide for a good night's sleep. With more than 1.5 million copies in print, Dr. Marc Weissbluth's step-by-step regimen for instituting beneficial habits within the framework of your child's natural sleep cycles has long been the standard-setter in baby sleep books. Now with a new introduction and quick-start guide to getting your child to sleep, *Healthy Sleep Habits, Happy Child* has been totally rewritten and reorganized to give tired parents the information they need quickly and succinctly. This new edition also includes the very latest research on the importance of

- implementing bedtime routines
- practicing parental presence at bedtime
- recognizing drowsy signs
- the role of the father as an active partner in helping the child sleep better
- overcoming challenges families face to help their child sleep better
- different cultural sleep habits from around the world
- individualized and nonjudgmental approaches to sleep training

Sleep is vital to your child's health, growth, and development. The fifth edition of *Healthy Sleep Habits, Happy Child* gives parents proven strategies to ensure healthy, high-quality sleep for children at every age. Climate change is one of the most pressing problems facing the global community. Although most states agree that climate change is occurring and is at least partly the result of humans' reliance on fossil fuels, managing a changing global climate is a formidable challenge. Underlying this challenge is the fact that states are sovereign, governed by their own laws and regulations. Sovereignty requires that states address global problems such as climate change on a voluntary basis, by negotiating international agreements. Despite a consensus on the need for global action, many questions remain concerning how a meaningful international climate agreement can be realized. This book brings together leading experts to speak to such questions and to offer promising ideas for the path toward a new climate agreement. Organized in three main parts, it examines the potential for meaningful climate cooperation. Part 1 explores sources of conflict that lead to barriers to an effective climate agreement. Part 2

investigates how different processes influence states' prospects of resolving their differences and of reaching a climate agreement that is more effective than the current Kyoto Protocol. Finally, part 3 focuses on governance issues, including lessons learned from existing institutional structures. The book is unique in that it brings together the voices of experts from many disciplines, such as economics, political science, international law, and natural science. The authors are academics, practitioners, consultants and advisors. Contributions draw on a variety of methods, and include both theoretical and empirical studies. The book should be of interest to scholars and graduate students in the fields of economics, political science, environmental law, natural resources, earth sciences, sustainability, and many others. It is directly relevant for policy makers, stakeholders and climate change negotiators, offering insights into the role of uncertainty, fairness, policy linkage, burden sharing and alternative institutional designs.

A New Introduction to American Studies provides a coherent portrait of American history, literature, politics, culture and society, and also deals with some of the central themes and preoccupations of American life. It will provoke students into thinking about what it actually means to study a culture. Ideals such as the commitment to liberty, equality and material progress are fully examined and new light is shed on the sometimes contradictory ways in which these ideals have informed the nation's history and culture. For introductory undergraduate courses in American Studies, American History and American Literature.

A New Norm is a poetic tale that is intended to reflect the feelings of those of us who struggle with anxiety, depression, grief, anger, doubt, shame, fear and more, yet provide encouragement that difficulties such as these can be overcome. It expresses how routine thoughts of negativity can sometimes cloud our reality making it difficult to enjoy life, to appreciate what is truly good, to have positive relationships, or to develop to one's full potential. It is a story that reminds us that perception is reality. That if one is willing to look, willing to accept, and willing to try, that there is a light both within and beyond available to not only illuminate, but change our world for the better. Our hope is that this story and the discussion guide that follows will become a springboard for a conversation with ourselves and/or with others to define what our dark clouds are and how we can make efforts to find the light of our new norm.

A New Norm is the result of a partnership between Avera Behavioral Health and Children's Home Society of South Dakota in a joint effort to promote mental wellness. Purchases of this book will benefit the mission of helping kids and families served by both of these organizations.

Wealthy, powerful, and potentially dangerous, hedge-fund managers have emerged as the stars of twenty-first century capitalism. Based on unprecedented access to the industry, *More Money Than God* provides the first authoritative history of hedge funds. This is the inside story of their origins in the 1960s and 1970s, their explosive battles with central banks in the 1980s and 1990s, and finally their role in the financial crisis of 2007-9. Hedge funds reward risk takers, so they tend to attract larger-than-life personalities. Jim Simons began life as a code-breaker and mathematician, co-authoring a paper on theoretical geometry that led to breakthroughs in string theory. Ken Griffin started out trading convertible bonds from his Harvard dorm room. Paul Tudor Jones happily declared that a 1929-style crash would be 'total rock-and-roll' for him. Michael Steinhardt was capable of reducing underlings to sobs. 'All I want to do is kill myself,' one said. 'Can I watch?' Steinhardt responded. A saga of riches and rich egos, this is also a history of discovery.

Drawing on insights from mathematics, economics and psychology to crack the mysteries of the market, hedge funds have transformed the world, spawning new markets in exotic financial instruments and rewriting the rules of capitalism. And while major banks, brokers, home lenders, insurers and money market funds failed or were bailed out during the crisis of 2007-9, the hedge-fund industry survived the test, proving that money can be successfully managed without taxpayer safety nets. Anybody pondering fixes to the financial system could usefully start here: the future of finance lies in the history of hedge funds. "Unsettled is a remarkable book—probably the best book on climate change for the intelligent layperson—that achieves the feat of conveying complex information clearly and in depth." —Claremont Review of Books "Surging sea levels are inundating the coasts." "Hurricanes and tornadoes are becoming fiercer and more frequent." "Climate change will be an economic disaster." You've heard all this presented as fact. But according to science, all of these statements are profoundly misleading. When it comes to climate change, the media, politicians, and other prominent voices have declared that "the science is settled." In reality, the long game of telephone from research to reports to the popular media is corrupted by misunderstanding and misinformation. Core questions—about the way the climate is responding to our influence, and what the impacts will be—remain largely unanswered. The climate is changing, but the why and how aren't as clear as you've probably been led to believe. Now, one of America's most distinguished scientists is clearing away the fog to explain what science really says (and doesn't say) about our changing climate. In *Unsettled: What Climate Science Tells Us, What It Doesn't, and Why It Matters*, Steven Koonin draws upon his decades of experience—including as a top science advisor to the Obama administration—to provide up-to-date insights and expert perspective free from political agendas. Fascinating, clear-headed, and full of surprises, this book gives readers the tools to both understand the climate issue and be savvier consumers of science media in general. Koonin takes readers behind the headlines to the more nuanced science itself, showing us where it comes from and guiding us through the implications of the evidence. He dispels popular myths and unveils little-known truths: despite a dramatic rise in greenhouse gas emissions, global temperatures actually decreased from 1940 to 1970. What's more, the models we use to predict the future aren't able to accurately describe the climate of the past, suggesting they are deeply flawed. Koonin also tackles society's response to a changing climate, using data-driven analysis to explain why many proposed "solutions" would be ineffective, and discussing how alternatives like adaptation and, if necessary, geoengineering will ensure humanity continues to prosper. *Unsettled* is a reality check buoyed by hope, offering the truth about climate science that you aren't getting elsewhere—what we know, what we don't, and what it all means for our future. Steve Case, co-founder of America Online (AOL) and one of America's most accomplished entrepreneurs, shares a roadmap for how anyone can succeed in a world of rapidly changing technology. We are entering, he explains, a new paradigm called the "Third Wave" of the Internet. The first wave saw AOL and other companies lay the foundation for consumers to connect to the Internet. The second wave saw companies like Google and Facebook build on top of the Internet to create search and social networking capabilities, while apps like Snapchat and Instagram leverage the smartphone revolution. Now, Case argues, we're entering the Third Wave: a period in which entrepreneurs will vastly transform major

"real world" sectors like health, education, transportation, energy, and food—and in the process change the way we live our daily lives. "Some books provide us with information about the world, but every once in a while a book appears that enables us to imagine new, more wonderful worlds. [A New Kind of Christianity] is one of these."

—Peter Rollins, *Ikon*

A New Kind of Christianity is Brian D. McLaren's much anticipated follow-up to his breakthrough work of the emergent-church movement, *A New Kind of Christian*. Named by Time magazine as one of America's top 25 evangelicals, McLaren, along with such contemporaries as N.T. Wright, Jim Wallis, and Rob Bell, is one of the acknowledged leaders of a new generation of Christians who want to update their faith for current times while remaining true to the core message of Jesus. In this controversial and thought-provoking book, McLaren explores the questions that will determine the shape of Christianity for the next 500 years. Every year, the cost of a four-year degree goes up, and the value goes down. But for many students, there's a better answer. So many things are getting faster and cheaper. Movies stream into your living room, without ticket or concession-stand costs. The world's libraries are at your fingertips instantly, and for free. So why is a college education the only thing that seems immune to change? Colleges and universities operate much as they did 40 years ago, with one major exception: tuition expenses have risen dramatically. What's more, earning a degree takes longer than ever before, with the average time to graduate now over five years. As a result, graduates often struggle with enormous debt burdens. Even worse, they often find that degrees did not prepare them to obtain and succeed at good jobs in growing sectors of the economy. While many learners today would thrive with an efficient and affordable postsecondary education, the slow and pricey road to a bachelor's degree is starkly the opposite. In *A New U: Faster + Cheaper Alternatives to College*, Ryan Craig documents the early days of a revolution that will transform—or make obsolete—many colleges and universities. Alternative routes to great first jobs that do not involve a bachelor's degree are sprouting up all over the place. Bootcamps, income-share programs, apprenticeships, and staffing models are attractive alternatives to great jobs in numerous growing sectors of the economy: coding, healthcare, sales, digital marketing, finance and accounting, insurance, and data analytics. *A New U* is the first roadmap to these groundbreaking programs, which will lead to more student choice, better matches with employers, higher return on investment of cost and time, and stronger economic growth. A Turing Award-winning computer scientist and statistician shows how understanding causality has revolutionized science and will revolutionize artificial intelligence "Correlation is not causation." This mantra, chanted by scientists for more than a century, has led to a virtual prohibition on causal talk. Today, that taboo is dead. The causal revolution, instigated by Judea Pearl and his colleagues, has cut through a century of confusion and established causality -- the study of cause and effect -- on a firm scientific basis. His work explains how we can know easy things, like whether it was rain or a sprinkler that made a sidewalk wet; and how to answer hard questions, like whether a drug cured an illness. Pearl's work enables us to know not just whether one thing causes another: it lets us explore the world that is and the worlds that could have been. It shows us the essence of human thought and key to artificial intelligence. Anyone who wants to understand either needs *The Book of Why*. In a time of climate change and mass extinction, how we garden matters more than ever: "An outstanding and deeply passionate book." —Marc Bekoff,

author of *The Emotional Lives of Animals* Plenty of books tell home gardeners and professional landscape designers how to garden sustainably, what plants to use, and what resources to explore. Yet few examine why our urban wildlife gardens matter so much—not just for ourselves, but for the larger human and animal communities. Our landscapes push aside wildlife and in turn diminish our genetically programmed love for wildness. How can we get ourselves back into balance through gardens, to speak life's language and learn from other species? Benjamin Vogt addresses why we need a new garden ethic, and why we urgently need wildness in our daily lives—lives sequestered in buildings surrounded by monocultures of lawn and concrete that significantly harm our physical and mental health. He examines the psychological issues around climate change and mass extinction as a way to understand how we are short-circuiting our response to global crises, especially by not growing native plants in our gardens. Simply put, environmentalism is not political; it's social justice for all species marginalized today and for those facing extinction tomorrow. By thinking deeply and honestly about our built landscapes, we can create a compassionate activism that connects us more profoundly to nature and to one another. "A fresh and moving story of a mother's dedication to acquire a coat for her daughter in post-World War II hard times. Anna's mother decides to trade the few valuables she has left for wool and for the services of a spinner, a weaver, and a tailor. Lobel's pictures do a tremendous job of evoking the period. Insightful and informative, this may make children consider how precious the ordinary can become in times of turmoil."--(starred review) *Booklist* *Systems Consultation* challenges two basic assumptions of family therapy: first, that what family therapists should be doing is curing pathology; second, that family interactions can be understood by focusing on families to the exclusion of larger systems. In asking whether therapy is the best and only model for what family therapists do, this book registers a definitive no. In its place it offers a systems consultation role that more accurately captures the range of activities therapists can and currently do engage in. "Per the UK publisher William Collins's promotional copy: "There is a quarter of this planet which is often forgotten in the histories that are told in the West. This quarter is an oceanic one, pulsating with winds and waves, tides and coastlines, islands and beaches. The Indian and Pacific Oceans constitute that forgotten quarter, brought together here for the first time in a sustained work of history." More specifically, Sivasundaram's aim in this book is to revisit the Age of Revolutions and Empire from the perspective of the Global South. *Waves Across the South* ranges from the Arabian Sea across the Indian Ocean to the Bay of Bengal, and onward to the South Pacific and Australia's Tasman Sea. As the Western empires (Dutch, French, but especially British) reached across these vast regions, echoes of the European revolutions rippled through them and encountered a host of indigenous political developments. Sivasundaram also opens the door to new and necessary conversations about environmental history in addition to the consequences of historical violence, the extraction of resources, and the indigenous futures that Western imperialism cut short"-- *Spot*, the beloved hero of *Put Me in the Zoo*, is back in another *Beginner Book* classic. When *Spot* grows tired of doing tricks in the circus, he decides to turn into another animal. But what kind? An elephant? An elephant is too big. A giraffe? A giraffe is too tall. How about a mouse? Can *Spot's* friends help him see that the very best thing to be is himself? *I Want to Be Somebody New!* is a spot-on tale of

individuality and friendship. Originally created by Dr. Seuss, Beginner Books encourage children to read all by themselves, with simple words and illustrations that give clues to their meaning. "Spot changes from elephant to giraffe to mouse, trying to find a new identity, but discovers that every animal shape has its drawbacks. This intelligent, cheerful sequel, with its simple rhyming text, lives up to the reputation of its predecessor."--Publishers Weekly. Although covenant is a major theme in Hebrews, Morrison contends all mention of covenant can be deleted without damaging the coherence of the epistle or its christological conclusions. What role, then, does the covenant motif have in the epistle? The arguments in Hebrews are aimed at a Jewish audience--they ignore the needs and religious options relevant to Gentiles. For the readers, the Sinai covenant was the only relevant conceptual competitor to Christ. First-century Jews looked to the Abrahamic and Mosaic covenants as the basis of their obligations to God and God's promises toward them. Although most Jewish writers merged these covenants as if they were one, the author of Hebrews does not--he retains the Abrahamic promises while arguing that the Mosaic covenant is obsolete. The covenant concept supports the exhortations of Hebrews in two ways: 1) it provides the link between priesthood, worship rituals, and other laws, and 2) it enables the author to argue for allegiance to the community as allegiance to Christ. Have you ever tried spinning hand painted top or dyed rovings only to be disappointed with the color outcomes in your yarns or finished projects? This book clearly and artfully walks you through understanding color theory making it less intimidating for both novice and expert spinners alike. Never before has a book presented the same dyed top worked up into 20+ different approaches accompanied by easy to follow directions. You will be able to see how the techniques look in both a skein and a knitted swatch. Plus there are photos of finished products accompanying the techniques to make envisioning the spinning applications even easier. After reading this book you will be inspired to delve into your stash with excitement and colorful confidence in your spinning. **INSTANT NEW YORK TIMES BESTSELLER** A dramatically new understanding of human history, challenging our most fundamental assumptions about social evolution—from the development of agriculture and cities to the origins of the state, democracy, and inequality—and revealing new possibilities for human emancipation. For generations, our remote ancestors have been cast as primitive and childlike—either free and equal innocents, or thuggish and warlike. Civilization, we are told, could be achieved only by sacrificing those original freedoms or, alternatively, by taming our baser instincts. David Graeber and David Wengrow show how such theories first emerged in the eighteenth century as a conservative reaction to powerful critiques of European society posed by Indigenous observers and intellectuals. Revisiting this encounter has startling implications for how we make sense of human history today, including the origins of farming, property, cities, democracy, slavery, and civilization itself. Drawing on pathbreaking research in archaeology and anthropology, the authors show how history becomes a far more interesting place once we learn to throw off our conceptual shackles and perceive what's really there. If humans did not spend 95 percent of their evolutionary past in tiny bands of hunter-gatherers, what were they doing all that time? If agriculture, and cities, did not mean a plunge into hierarchy and domination, then what kinds of social and economic organization did they lead to? The answers are often unexpected, and suggest that the course of human history may be less set in stone, and

more full of playful, hopeful possibilities, than we tend to assume. The Dawn of Everything fundamentally transforms our understanding of the human past and offers a path toward imagining new forms of freedom, new ways of organizing society. This is a monumental book of formidable intellectual range, animated by curiosity, moral vision, and a faith in the power of direct action. Includes Black-and-White Illustrations

On the eve of its 50th anniversary, the Landscape Architecture Foundation asked a diverse group of the world's leading landscape architects to reflect on the last half-century and present bold ideas for what the discipline should achieve in the future. Well beyond the public conception of the profession as "gardener" or "park designer," these landscape architects discussed their role in addressing weighty issues like climate change, urbanization, management of vital resources like water, and global inequities. The New Landscape Declaration brings together their ideas and experiences in essays from thirty-three preeminent thinkers, including: James Corner, designer of the High Line in New York City Randy Hester, founder of the modern participatory design movement in landscape architecture Kate Orff, researcher, innovator, and design activist Martha Schwartz, acclaimed landscape architect and artist turned activist Carl Steinitz, Geodesign pioneer Richard Weller, prolific design researcher and author Kongjian Yu, celebrated designer, dean, and author from the People's Republic of China

The New Landscape Declaration asserts the vital role of landscape architecture in solving the defining issues of our time. Relevant to designers across the globe, the ideas cross disciplinary boundaries and challenge current silos of thought and practice, underscoring the need to diversify, innovate, and create a bold culture of leadership, advocacy, and activism. Our ancestors gathered around a fire in a circle, families gather around their kitchen tables in circles, and now we are gathering in circles as communities to solve problems. The practice draws on the ancient Native American tradition of a talking piece. Peacemaking Circles are used in neighborhoods to provide support for those harmed by crime and to decide sentences for those who commit crime, in schools to create positive classroom climates and resolve behavior problems, in the workplace to deal with conflict, and in social services to develop more organic support systems for people struggling to get their lives together. A title in The Little Books of Justice and Peacebuilding Series. In this quick and vibrant little book, Kelly Kopic presents the nature, method and manners of theological study for newcomers to the field. He emphasizes that theology is more than a school of thought about God, but an endeavor that affects who we are. "Theology is about life," writes Kopic. "It is not a conversation our souls can afford to avoid." Examines the limitations of mechanistic theories of life and explains the author's theory of the interconnection of living organisms

A prose translation of the classic Indian poem, prepared for the specific needs of students, teachers, and yoga instructors, introduces the core principles of Vedic philosophy while endeavoring to accurately reflect the forms, sounds, and rhythms of the original text. Original.

More severe storms and rising seas will inexorably push the American coastline inland with profound impact on communities, infrastructure, and natural systems. In A New Coast, Jeffrey Peterson presents the science behind predictions for coastal impacts and explains how current policies fall short of what's needed to prepare for these changes. He outlines a framework of bold, new national policies and funding to support local and state governments. Peterson calls for engagement of citizens, the private sector, as well as local and national leaders

in a "campaign for a new coast." This is a forward-looking volume offering new insights for policymakers, planners, business leaders preparing for the changes coming to America's coast. Very few scientific works remain interesting 50 years after their initial publication. One notable exception to this observation is *On Dexterity and Its Development*, by Nikolai A. Bernstein, one of the premier minds in movement science. Included here in a translation from the original Russian, this work presents Bernstein's major ideas on the development and control of voluntary movement in general and the notion of dexterity in particular. Originally written in the 1940s, and published in 1991 in the Russian, the ideas in this book are anything but obsolete; in fact, we are just beginning to understand the depth and breadth of Bernstein's thinking. Included in addition to Bernstein's classic text are seven chapters written by contemporary scientists working in disciplines related to human movement. Written in a reader-friendly style similar to Bernstein's, the contributions are intended to illuminate and build on Bernstein's original work, as well as to be understandable and interesting to a wide audience, including scholars in psychology and movement science. The combination of the accessible style and the state of the art account of the processes underlying human voluntary movements, particularly dexterous ones, makes this book unique. The book behind the viral internet sensation of "The Scottish Granny" reading this story to her grandchild. A young boy suddenly notices a big problem - his bum has a huge crack! So he sets off to find a new one. Will he choose an armor-plated bum? A rocket bum? A robot bum? Find out in this silly, quirky tale with hilarious illustrations.
