What is it about cougars? Why does this phantom of the eastern woods stimulate such passion among so many people? For decades wildlife biologists have been telling us that they do not exist east of the Mississippi and yet each year there are hundreds of people claiming to have seen one. Is there any truth to these claims, or are they misidentifications, wishful thinking or tall tales? Nature writer Robert Tougias journeys deep into the world of the cougar and into the reasoning of those that believe they exist and those that do not. The Quest For The Eastern Cougar: Extinction or Survival? is an informative voice of reason that quiets the confusion regarding the powerful predator. It tells us about the cat's historic demise and alleged modern human encounters. The scientific explanations as to why one ought to believe or dismiss the cougar's presence are unraveled. It discusses the ultimate question: whether or not cougars have survived in the East or have already left us. No matter what you choose to believe, cougars are likely to continue to make the news. Cougars are turning up in unthinkable places these days, attacks are becoming more frequent out West, eastern sightings have increased and are beginning to offer better evidence. We will be hearing much more about these powerful carnivores, and in the not too distant future we will see more of them. Are there cougars lurking in your back woodlot? Is the East ready for this magnificent predator? "In this readable, well-researched book, Robert Tougias has made a valuable and timely contribution to the public and scientific discourse about mountain lions in the East and the potential for their recovery. This book deserves to be widely read by conservationists, researchers, policy makers and anyone interested in America's lion." Christopher Papouchis Conservation Biologist Mountain Lion Foundation Sacramento, CA Robert Tougias sheds much-needed light on one of America's most intriguing wildlife mysteries. This book is for anyone who's ever wondered about the creatures that haunt our forests and our collective imagination. David Baron Author-Beast In The Garden Norton Publishing The Eastern Front, 1941. Operation Barbarossa. Hitler's armies advance into the Soviet Union to conquer Lebensraum in the East. Among the corps commanders is General Gotthard Heinrici, a career soldier, a highly decorated First World War veteran, who observed and recorded in his diary and letters the unprecedented harshness of the German conduct of the campaign. With remarkable candour he described his experiences at the front and the everyday lives of the troops under his command - and the appalling conditions in which the war was fought. In his writings he revealed his growing doubts about Hitler's strategy and his mounting concern as the Wehrmacht was implicated in

war crimes and the first actions of the Holocaust. This selection from Heinrich's diaries and letters, edited and with a perceptive introduction by Johannes Hârter, gives a fascinating inside view of the fighting on the Eastern Front from a commander's perspective. It also provides an unusual insight into the feelings, attitudes and acute anxieties of one of the Wehrmacht's most able generals in the midst of a brutal campaign. The landscapes of North America, including eastern forests, have been shaped by humans for millennia, through fire, agriculture, hunting, and other means. But the arrival of Europeans on America's eastern shores several centuries ago ushered in the rapid conversion of forests and woodlands to other land uses. By the twentieth century, it appeared that old-growth forests in the eastern United States were gone, replaced by cities, farms, transportation networks, and second-growth forests. Since that time, however, numerous remnants of eastern old growth have been discovered, meticulously mapped, and studied. Many of these ancient stands retain surprisingly robust complexity and vigor, and forest ecologists are eager to develop strategies for their restoration and for nurturing additional stands of old growth that will foster biological diversity, reduce impacts of climate change, and serve as benchmarks for how natural systems operate. Forest ecologists William Keeton and Andrew Barton bring together a volume that breaks new ground in our understanding of ecological systems and their importance for forest resilience in an age of rapid environmental change. This edited volume covers a broad geographic canvas, from eastern Canada and the Upper Great Lakes states to the deep South. It looks at a wide diversity of ecosystems, including spruce-fir, northern deciduous, southern Appalachian deciduous, southern swamp hardwoods, and longleaf pine. Chapters authored by leading old-growth experts examine topics of contemporary forest ecology including forest structure and dynamics, below-ground soil processes, biological diversity, differences between historical and modern forests, carbon and climate change mitigation, management of old growth, and more. This thoughtful treatise broadly communicates important new discoveries to scientists, land managers, and students and breathes fresh life into the hope for sensible, effective management of old-growth stands in eastern forests. 'In Stockwin's hands the sea story will continue to entrance readers across the world' - Guardian With Bonaparte held to a stalemate in Europe, the race to empire is now resumed. Britain's ambitions turn to the Spice Islands, the Dutch East Indies, where Admiral Pellew has been sent to confront the enemy's vastly rich holdings in these tropical islands. Captain Sir Thomas Kydd joins reinforcements to snatch these for the British Crown. The two colonial masters of India and the East Indies face each other in mortal striving for the region - there can be only one victor to hold all the spoils. The colonial genius, Stamford Raffles, believes Britain should strike at the very centre of Dutch spice production, the Moluccas, rather than the fortresses one by one but is fiercely opposed. Kydd, allying himself to this cause, conspires to lead a tiny force to a triumphant conclusion - however the Dutch, stung by this loss, claim vengeance from the French. A battle for Java and an empire in the East stretches Kydd and Tyger's company to their very limits. ***** Praise for Julian Stockwin's Kydd series 'Paints a vivid picture of life aboard the mighty ship-of-the-line' Daily Express 'This heady adventure blends fact and fiction in rich, authoritative detail' Nautical Magazine 'Fans of fast-paced adventure will get their fill with this book' Historical Naval Society What can the architecture of ancient ships tell us about their capacity to carry cargo or to navigate certain trade routes? How do such insights inform our knowledge of the ancient economies that depended on maritime trade across the Mediterranean? These and similar questions lie behind *Sailing from Polis to Empire*, a fascinating insight into the practicalities of trading by boat in the ancient world. Allying modern scientific knowledge with Hellenistic sources, this interdisciplinary collection brings together experts in various fields of ship archaeology to shed new light on the role played by ships and sailing in the exchange networks of the Mediterranean. Covering all parts of the Eastern Mediterranean, these outstanding contributions delve into a broad array of data - literary, epigraphical, papyrological, iconographic and archaeological - to understand the trade routes that connected the economies of individual cities and kingdoms. Unique in its interdisciplinary approach and focus on the Hellenistic period, this collection digs into the questions that others don't think to ask, and comes up with (sometimes surprising) answers. It will be of value to researchers in the fields of naval architecture, Classical and Hellenistic history, social history and ancient geography, and to all those with an interest in the ancient world or the seafaring life. Even on the hottest summer days this book will transport you." —Helen Macdonald, author of *H is for Hawk*, in *Kirkus* I saw my first Blakiston's fish owl in the Russian province of Primorye, a coastal talon of land hooking south into the belly of Northeast Asia . . . No scientist had seen a Blakiston's fish owl so far south in a hundred years . . . When he was just a fledgling birdwatcher, Jonathan C. Slaght had a chance encounter with one of the most mysterious birds on Earth. Bigger than any owl he knew, it looked like a small bear with decorative feathers. He snapped a quick photo and shared it with experts. Soon he was on a five-year journey, searching for this enormous, enigmatic creature in the lush, remote forests of eastern Russia. That first sighting set his calling as a scientist. Despite a wingspan of six feet and a height of over two feet, the Blakiston's fish owl is highly elusive. They are easiest to find in winter, when their tracks mark the snowy banks of the rivers where they feed. They are also endangered. And so, as Slaght and his devoted team set out to locate the owls, they aim to craft a conservation plan that helps ensure the species' survival. This quest sends them on all-night monitoring missions in freezing tents, mad dashes across thawing rivers, and free-climbs up rotting trees to check nests for precious eggs. They use cutting-edge tracking technology and improvise ingenious traps. And all along, they must keep watch against a run-in with a bear or an Amur tiger. At the heart of Slaght's story are the fish owls themselves: cunning hunters, devoted parents, singers of eerie duets, and survivors in a harsh and shrinking habitat. Through this rare glimpse into the everyday life of a field scientist and conservationist, *Owls of the Eastern Ice* testifies to the determination and creativity essential to scientific advancement and serves as a powerful reminder of the beauty, strength, and vulnerability of the natural world. While trying to return a lost ratlike cub to its home in the mountains, Fone and Smiley Bone encounter Rock Jaw, the wicked master of the eastern border. Presented in graphic novel format. This book in the popular *Images of War* series covers the deeds of the Waffen-SS on the Eastern Front during the Second World War. With extensive text and in-depth captions with many rare and unpublished photographs it is an absorbing analysis of the part they played on the Eastern Front. It reveals in detail how this elite band of men fought during the opening phase of Barbarossa, the invasion of Russia, how it supported and took part in the victory at Kharkov, Demyansk and other battles in the Soviet Union. The book reveals the Waffen-SS's role at Kursk and how it was forced to withdraw in the face of overwhelming enemy superiority and were rushed from one danger zone to another to plug gaps in the front. Often these troops faced an enemy ten-times their strength and it was for this reason they were feared and respected by their enemy. Although by early May 1945, the Waffen-SS was all but destroyed, having battled across half Russia and gone on to protect the withdrawals of the rest of the German Army to the very gates of Berlin. The story underlying this ethnography began with the recent discovery and commercialization of the remnant of an ancient "queendom" on the Sichuan-Tibet border. Recorded in classical Chinese texts, this legendary matriarchal domain has attracted not only tourists but the vigilance of the Chinese state. Tenzin Jinba's research examines the consequences of development of the queendom label for local ethnic, gender, and political identities and for state-society relations. This

book broadens readers' understanding of the stratigraphic framework and structural styles for improved hydrocarbon prospectivity in the intermediate and deeper horizons of the eastern Coastal Swamp Depo-belt of Nigeria's Niger Delta Basin. It equips readers to interpret complex sedimentary units, such as the paralic sequence of the Niger Delta Basin, using sequence stratigraphic tools integrated with well logs, biostratigraphic, paleobathymetric and seismic data. It also offers numerous tips and insights into reservoirs, seals, source rocks and hydrocarbon-type trends/distribution across several production fields, and provides a valuable guide to support exploration and production. The tuna resources of the eastern central Atlantic have been the object of an intensive fishery for over thirty years, and have been the object of numerous studies conducted under the coordination of the International Commission for the Conservation of Atlantic Tunas. This document presents a summary of current knowledge of the biology of the principal species of tuna in the eastern tropical Atlantic, the oceanographic environment of tunas and the influence of environmental conditions on production. A detailed description of the principal fisheries of the region and the history of their development is presented as well as the methods of population dynamics used to assess the abundance of the stocks and to estimate changes in the level of their exploitation. The Colorado River of the West drains a vast system of plateaus. On these plateaus are lone mountains, short ranges and groups of volcanic cones, and the principal effluents of the river have their sources in high mountains that stand on the rim of the great drainage basin. There is no considerable valley along the course of the Colorado River north of the thirty-fifth parallel nor along the course of any of its principal tributaries. The streams run chiefly in deep canons which, with other important topographic features, serve to divide the area into plateaus.
